

Blast and Paint Combination Rooms

absblast.com/products/optional-equipment/blast-and-paint-combination-rooms/

Combination blast and paint facilities from ABS Blast provide a space and money saving alternative to having a separate blast room and paint booth. Combination blast and paint rooms allow for both the Abrasive Blasting and Painting using the same room. Having both processes housed in the same room results in a substantial space and cost savings as well as saving valuable man hours.

Combination blast and paint rooms are ideally suited for surface preparation and painting of large items such as vehicles or large containers. The design team at ABS Blast can help you determine the best suited size for your combination blast and paint room.

Features Included

The combination blast and paint room from ABS Blast includes the following components, all engineered to provide a safe, controlled environment where blasting and painting can occur:

- Filter housing and filter elements
- Fan assembly
- Pressure differential gauge
- Exhaust stack and weather cap
- 10-gauge steel door to protect filters during abrasive blasting operations

Fully Equipped

Your combination blast and paint room from ABS Blast can be equipped with full or partial abrasive recovery systems for the recycling of the abrasive media. ABS Blast is fully equipped to provide standard and optional equipment for your blast room design.

2,500+ Completed Projects

United States | Canada | Mexico | Kazakhstan | Vietnam

ABS Blast is the worldwide leader in Abrasive Blast Room technology, design, and construction.

Custom Design and Engineering

ABS Blast designs the combination blast and paint room around your operation's needs. Our team of highly skilled engineers will design and build a combination blast and paint facility to your specifications and needs.

If your company is in the market for a combination blast and paint room, large or small, you owe it to yourself to contact us at ABS Blast or use our online quote form to find out why ABS Blast is the leader in the industry.

Our Engineered Products

Product	Description
Blast Rooms	Custom engineered blast rooms for controlled abrasive operations
Reclaim Floors	Sweep-in, partial, and full floor reclaim systems
Dust Collectors	Keep environments clean and contaminant free
Standard Equipment	Hoppers, separators, blast pots, control panels, elevators, screws
Optional Equipment	Combo rooms, catwalk assemblies, overhead handling, powered doors, rubber lining
Portable Equipment	Mobile abrasive blasting solutions
