

Sponge Media™

Sponge-Jet has engineered a line of composite abrasives, incorporating the best abrasives or micro-abrasive particles within high-performance synthetic sponge. The diverse range of recyclable composites provide superior results for aggressive profiling and abrading or delicate cleaning on highly sensitive substrates. The synthetic sponge captures up to 95% of the contaminants, reducing fugitive emissions through its MicroContainment™ feature.

Silver 30 Sponge Media™

This is the most commonly used Sponge Media for industrial coating removal and surface preparation. Silver 30 Sponge Media is ideal when a coarse angular profile is specified for the coating that is to be applied.

Sponge impregnated with 30 grit Aluminum Oxide to aggressively abrade and profile metals, concrete and other materials.

Specifications

Product Name:	Silver 30 Sponge Media™
Part #:	SJM-S-30
Abrasive / Cleaning Agent:	#30 Grit Aluminum Oxide
CARB Certified:	Yes
Package Size:	18.1 kg (40.00 lb)
Profile Carbon Steel:	±75 µ (±3 mils)
Achievable Range*:	50-125 µ (2-5 mils)

Features

Safer for workers

- Less worker exposure and fatigue
- Less eye and other injuries
- Contains no Crystalline Silica
- Contains no detectable Beryllium

Better for the Environment

- Clean, Dry, Low Dust reusable abrasive
- Extremely low dust

Improved Operational Efficiency

- Enhanced visibility and first-pass quality
- Fewer defects and rework, keeping projects on schedule
- High-quality surface preparation in sensitive or confined areas
- The ability for other trades to work nearby
- A solution for

Lower Direct and Indirect Costs

- Low inbound and outbound freight
- Less pollution, waste generation, fines and reporting
- Improved community relations
- Less liability, litigation and compliance reporting
- Less downtime
- Improved asset
- Less waste, disposal and material handling
- Greater production and efficiency
- Increased profits and production

- Extremely low dust generation compared to ordinary abrasives
- High Reuse (recycles)
- Lower fugitive emissions
- preparing surfaces near finished coatings, instruments and equipment
- Contains no thermal plastics (Ideal for Pulp and Paper Mills)
- Improved asset availability
- Coatings perform longer, saving on future maintenance and acquisition costs
- Easier staging, containment, ventilation and clean up

Applications

- Abatement (Lead, PCB, Asbestos)
- Coatings Removal From Concrete
- Industrial & Marine Coatings Removal (Tanks, Pipes, Super Structures, etc.)
- Alkyd-Latex
- Epoxy-Urethane
- High Solids Epoxy
- Linings
- Other specialized Applications as Indicated and or Specified
