

Abrasive Blast Systems, LLC
1-866-666-9309

**ABS Blast Provides
Solutions Tailored to Fit
Your Abrasive Blasting
Needs**

- ☐ Custom Design
- ☐ Retro-fit Existing Blast Room, Dust Collector and Reclaim Equipment
- ☐ Turnkey Installation
- ☐ Portable Equipment

ABS Blast Rooms Are

- ✓ Economic
- ✓ Safe
- ✓ Environmentally Friendly
- ✓ Reliable

**Customer Satisfaction is
Our Focus**

"The job isn't finished until
our customer is
completely satisfied."

Abrasive Blast Systems

The core of any modern abrasive blast system is the blast room. Confining the blasting operation to a controlled, clean environment enables efficient abrasive recycling. Recycling blast abrasives saves money and protects the environment.

Our blast rooms consist of an amply lit work area, an abrasive reclaim floor that collects the used abrasives, an abrasive transport and separation system that removes trash while returning clean abrasive to the blast tank and a dust collector for keeping the environment clean and contaminant free.

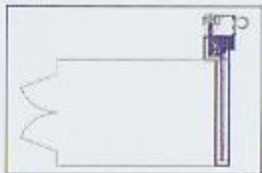

All of our blast rooms include the following quality features:

- ✓ Reinforced structural steel abrasive storage hopper with easy access for cleaning and maintenance
- ✓ Highly selective rotary drum + air-wash abrasive separator
- ✓ Heavy duty 9" diameter return augers with 3/8" thick flighting

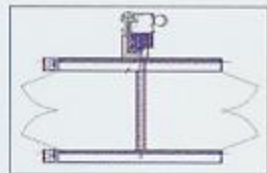

ABS Blast offers a full spectrum of reclaim floor designs and room configurations. From economical single screw reclaim floors to highly efficient full floor reclaim systems, ABS Blast will help you design a solution uniquely tailored to your production and economic needs.

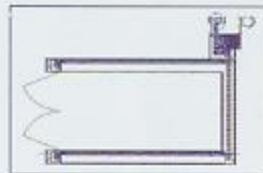

Whether you are looking for a complete turnkey system, an existing system retro-fit, a portable blast system, replacement parts such as dust collector cartridge filters, augers, elevator belts, bushings, bearings or motors, ABS Blast is your source for high quality abrasive blast systems and components.
